

DocAssistant

complete solution for doctors

- Simplifying clinical work
- Less paperwork
- Better patient care

Multi Physician

Multi Facility

Multi Specialty

Today's medical practitioners rely more on computerized documentation than keeping piles of century old papers. Easy communication, multi-practice environment, and making all data available under one roof are the key to success for its increasing popularity.

DocAssistant, the latest product from **iton**, allows the doctors and clinical staff to create a wide range of legible and accurate medical documents, with a high degree of automation.

DocAssistant is designed to meet the document requirements of modern healthcare providers. It boasts of a rich set of features ensuring significant benefits to the medical practitioners, as well as the patients.

Features

- Runs on Tablet PC XP with handwriting and voice recognition support
- Designed from ground up with latest Microsoft Technologies and extensively uses XML standards
- Can be used to produce and manage a broad range of medical documents including Patient Progress Notes, Lab Results, Assessment, Treatment Plan, Prescriptions, Reports and Transcript
- Forms available for almost all the specialties like ENT, Cardiac, Gastroenterology, Neurology etc. A separate form available for general physicians also
- Increases accuracy of clinical data, improves legibility of medical documents, quickens the process of document creation by deriving from similar past encounters, makes historical documents easily available
- Supports role-based security
- Ready access to thousands of template texts to quickly enter an encounter data; a provider can create his/her own templates
- Quickens the process of prescription generation without physically writing them, check new prescription against a patient's medication list and allergies, thus preventing interactions

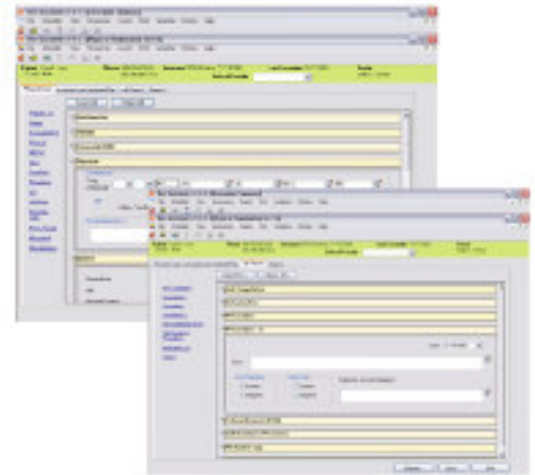

Scheduler

- Leads to efficient management of schedules from both ends: front office and the provider in multi-provider practice management
- Enables the front office to keep track of a provider's daily, weekly and monthly schedule, and book appointment accordingly
- Front office enters patient demographic information, books appointment and allows provider proceed with the appointment
- Benefits the provider with his contacts, new appointments, referrals, messages and things to do
- Lets viewing the details of all past encounters

Encounter

- Physical examinations forms for all specialties are organized in convenient tree structure
- Provides access to a number of standard ICD codes, CPT codes, medications/formulations data during encounter entry
- Gives access to all kinds of laboratory reports like Immunizations, Anticoagulation, ECG, Urinalysis etc.
- Gives access to thousands of medical terms and sentences during encounter entry. Provides an easy and fast route to fill the encounter with minimal effort and maximum efficiency
- Printable transcripts available in standard formats like Microsoft Excel, Microsoft Word, Adobe Portable Document Format (PDF)

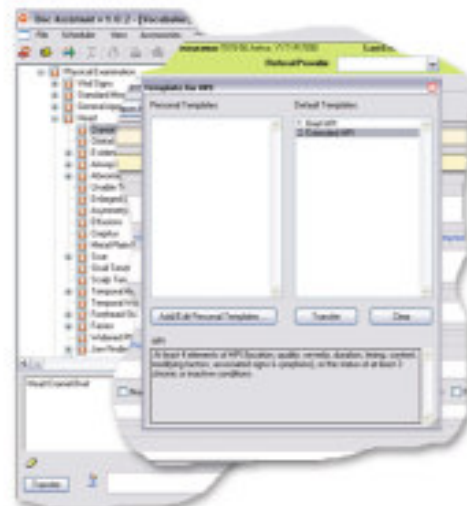

Sticky Notes

- Sticky notes are provided with almost all the items during encounter entry to enable the provider to enter handwriting into the system
- Sticky notes can be used for a 'to do list', diagram can be drawn by the provider about patient's body parts during the encounter or can even be used to take notes

Template Texts

- Readily available thousands of template texts categorically arranged which a provider can access using a simple context menu during the patient encounter
- What's more, a provider can insert his/her own customized texts into the vocabulary databases which he/she is most comfortable with

Benefits

- Allows the provider to see more patients without working harder or longer by easily organizing appointments, contacts, patient encounter data, handwritten notes, transcripts, easy to access medical terms and many more.
- Tree structure organization of the encounter data enables provider to access data specific to a body part with a single tap on the electronic pen or a single click of the mouse device
- Reduces the expenses related to transcription, data analysis, paper storage
- Considerably reduces the risk by improving the quality of the data besides maintaining the security and integrity by informing the provider on time through numerous alerts
- No more valuable hours lost to locate a specific patient record. Numerous powerful search forms lets a provider locate a patient record by dates, patient name, timeslots
- Designed from ground up with latest technologies based on XML standards enabling integration seamlessly with existing information systems reducing total cost of ownership, faster creation of more accurate documents and enhanced patient safety
- Product support service backed by facility of online chatting with representatives, easy to use forms to submit product feedbacks and bugs, numerous FAQ, case-studies and whitepapers apart from interacting with the representatives over the phone
